Project: Storyboard and final prototype

Final Improvements & Refinements

Did not make any new significant changes.

Changes to prototype to help improve video

- To demo me cooking, I thought it would be a good idea to *not* cook carbonara pasta (as that's my recipe demo in my prototype) since it's pretty complex and has a lot of steps. I don't want to spend too much time on cooking the meal rather than demoing the prototype. The change I made was I included a recipe page for scrambled eggs since that's pretty basic and realistic to do in the given timeframe.
- When signing up for a new account and answering the setup questions, I added more frames / screens so that I can film a user clicking the answer from one question to another rather than having all of the questions answered / pre-filled in.
- When a user finishes signing up and setting up their new account, rather than getting to a filled out tracker screen (month of October has some dates filled out with tracked meals), they get to see a new month that has nothing tracked
